*The Decentralization of Forest Governance* Moira Moeliono,Eva Wollenberg,Godwin Limberg,2012-05-31 'This book provides an excellent overview of more than a decade of transformation in a forest landscape where the interests of local people, extractive industries and globally important biodiversity are in conflict. The studies assembled here teach us that plans and strategies are fine but, in the real world of the forest frontier, conservation must be based upon negotiation, social learning and an ability to muddle through.' Jeffrey Sayer, senior scientific adviser, Forest Conservation Programme IUCN - International Union for of Nature The devolution of control over the world's forests from national or state and provincial level governments to local control is an ongoing global trend that deeply affects all aspects of forest management, conservation of biodiversity, control over resources, wealth distribution and livelihoods. This powerful new book from leading experts provides an in-depth account of how trends towards increased local governance are shifting control over natural resource management from the state to local societies, and the implications of this control for social justice and the environment. The book is based on ten years of work by a team of researchers in Malinau, Indonesian Borneo, one of the world's richest forest areas. The first part of the book sets the larger context of decentralization's impact on power struggles between the state and society. The authors then cover in detail how the devolution process has occurred in Malinau, the policy context, struggles and conflicts and how Malinau has organized itself. The third part of the book looks at the broader issues of property relations, conflict, local governance and political participation associated with decentralization in Malinau. Importantly, it draws out the salient points for other international contexts including the important determination that 'local political alliances', especially among ethnic minorities, are taking on greater prominence and creating new opportunities to influence forest policy in the world's richest forests from the ground up. This is top-level research for academics and professionals working on forestry, natural resource management, policy and resource economics worldwide. Published with CIFOR

**Reduced Impact Logging Guidelines for Indonesia** Elias,Grahame Applegate,Kuswata Kartawinata,Machfudh,Art Klassen,2001-01-01 The principles and practices for forest harvesting in Indonesia (2000) have been developed to provide a uniform set of minimum standards for logging practices in the production and limited production forests in Indonesia. The provide the standard for WHAT is involved in planning and implementing logging activities in natural forest and WHY certain operations should be undertaken. The Reduced Impact Logging (RIL) guidelines for Indonesia provides the mechanism for

HOW the standards will be applied in the field or “how to do the work”. Tractor skidding-mostly by crawlers and skidders-is the most common system (ca. 90%) used in the Indonesian Selective Cutting and Planting (TPTI) System. Considering the fact that familiarity with more environmentally friendly logging system (such as cable and aerial logging) is still lacking in Indonesia, often due to cost, etc., RIL guidelines focus on ground-based harvesting which can be implemented in the lowland and hill forests in Indonesia. Target groups of this guidelines are production supervisors, RIL planners, bolck inspectors, road network planners, road construction supervisors, machine operators, chainsaw operators, tractor operators and their assistants.

**Life After Logging** E. Meijaard,Douglas Sheil,Robert Nasi,David Augeri,Barry Rosenbaum,Djoko Iskandar,Titiiek Setyawati,Martjan Lammertink,Ike Rachmatika,Anna Wong,Tonny Soehartono,Scott Stanley,Timothy O'Brien,2005-01-01 This book presents a technical review of ecological and life history information on a range of Bornean wildlife species, aimed at identifying what makes these species sensitive to timber harvesting practices and associated impacts. It addresses three audiences: 1) those involved in assessing and regulating timber harvesting activities in Southeast Asia, 2) those involved in trying to achieve conservation goals in the region, and 3) those undertaking research to improve multipurpose forest management. This book shows that forest management can be improved in many simple ways to allow timber extraction and wildlife conservation to be more compatible than under current practices. The recommendations can also be valuable to the many governmental and non-governmental organisations promoting sustainable forest management and eco-labelling. Finally, it identifies a number of shortcomings and gaps in knowledge, which the hope can interest the scientific community and promote further research. This review is, an important scientific step toward understanding and improving sustainable forestry practices for long-term biodiversity conservation. Even in the short term, however, significant improvements can be made to improve both conservation and the efficiency of forest management, and there is no need to delay action due to a perceived lack of information. In the longer term it is expected that the recommendations from this review will be implemented, and that further research will continue to help foster an acceptable balance among the choices needed to maintain healthy wildlife populations and biodiversity in a productive forest estate.

*Forests People and Power* Oliver Springate-Baginski,Piers Blaikie,2013-06-17 With tens of millions of hectares and hundreds of millions of lives in the balance, the debate over who should control South Asias forests is of tremendous political significance. This book provides an insightful and thorough assessment of important forest management transitions currently underway. MARK POFFENBERGER, EXECUTIVE DIRECTOR OF COMMUNITY FORESTRY INTERNATIONAL The contributions in this volume not only breathe life into the field of writing and analysis related to forests, they do so on the strength of extraordinarily insightful research. Kudos to Springate-Baginski and Blaikie for providing us with a set of

thoroughly researched, provocative studies that should be required reading not only for those interested in community forestry in south Asia, but in resource governance anywhere. ARUN AGRAWAL, ASSOCIATE PROFESSOR OF NATURAL RESOURCES & ENVIRONMENT, UNIVERSITY OF MICHIGAN, USA Makes a significant contribution to theory and practice of participatory forest management. YAM MALLA, EXECUTIVE DIRECTOR, REGIONAL COMMUNITY FORESTRY TRAINING CENTER FOR ASIA AND THE PACIFIC, BANGKOK This excellent and timely book provides thought-provoking insights to the issues of power and politics in forestry and the difficulties of transforming age-old structures that circumscribe the access of the poor to forests and their resources; it challenges our assumptions of the benefits of participatory forest management and the role of forestry in poverty reduction. It should be of interest to policy-makers and to all those who have been involved with the struggle of transforming forestry over the decades. DR MARY HOBLEY, HOBLEY SHIELDS ASSOCIATES (NATURAL RESOURCE MANAGEMENT AND PLANNING CONSULTANCY) A rare combination of extensive field study, social science insights and policy studies will be of immense value DR N. C. SAXENA, MEMBER OF NATIONAL ADVISORY COUNCIL, GOVERNMENT OF INDIA In recent decades participatory approaches to forest management have been introduced around the world. This book assesses their implementation in the highly politicized environments of India and Nepal. The authors critically examine the policy, implementation processes and causal factors affecting livelihood impacts. Considering narratives and field practice, with data from over 60 study villages and over 1000 household interviews, the book demonstrates why particular field outcomes have occurred and why policy reform often proves so difficult. Research findings on which the book is based are already influencing policy in India and Nepal, and the research and analysis have great relevance to forestry management in a wide range of countries. **Handbook of Physics** Walter Benenson,John W. Harris,Horst Stöcker,Holger Lutz,2006-01-13 Handbook of Physics is a veritable toolbox for rapid access to a wealth of physics information for everyday use in problem solving, homework, and examinations. This complete reference includes not only the fundamental formulas of physics but also experimental methods used in practice.

**Port Designer's Handbook** Carl A. Thoresen,2003 Over the past twenty years there has been considerable improvement and new information in the design of port and berth structures. This handbook reflects the lastest progress and

developments in navigation safety, port planning and site selection, layout of container, oil and gas terminals, cargo handling, berth design and construction, fender and mooring principles. It presents guidelines and recommendations for the main items and assumptions in the layout, desing and construction of modern port structures, and the forces and loadings acting on them. The book provides an evaluation of different designs and construction methods for port and berth structures, and recommendations given by the different international harbour standards and recommendations. Practising harbour and port engineers and students will find the handbook an invaluable source of information.

**Material Innovation: Packaging Design** Andrew H Dent,Leslie Sherr,2015-10-27 Explores new and innovative materials designed to change the way consumers experience product packaging The third in a series of ten volumes exploring the constantly evolving frontiers of design, Material Innovation: Packaging Design presents products whose packaging reaches new heights of innovation. The range is diverse and international, from “plantable” packaging that can be buried in dirt after consumer use, later to emerge as a plant to alcohol bottles with labels that react to music, and bespoke, collectible jars of Marmite XO. Material Innovation: Packaging Design explores not only the latest advances in consumer product packaging but also how such advances could fail or flourish within the increasingly digital landscape of the twenty-first century. Case studies featured throughout the book profile the innovative use of materials by a particular practitioner, practice, or company, offering specific and elegant solutions. Clearly structured and illustrated throughout, this book will connect reader (whether student or professional) to material.

**Aquaculture Water Reuse Systems: Engineering Design and Management** M.B. Timmons,T.M. Losordo,1994-10-25 The demand for high quality aquacultured products and an increasing concern for resource conservation has led individuals and large corporations to invest time and money in commercial scale recirculating production systems. However, there are relatively few reports of profitable recirculating production systems in operation. There is little doubt that most fish reared in ponds, floating net pens, or raceways can be produced in commercial scale recirculating systems. The objective of this book is to provide basic information and analytical skills for the reader so that they may make the proper design or investment decisions concerning water reuse and recycle systems. The chapters of this book are sequenced to provide continuity to a basic approach that would be used in designing a water reuse or recycle system. The chapter authors contributing to this book have written extensively in the literature already on the particular subject being addressed in their chapter. Considerable background information on the basic processes being presented is also given in each chapter to supplement the basic design information being provided. These chapters should provide the reader with essentially all the information required in order to design and manage a water reuse system. The book is written for engineers and biologists working in the area of intensive fish culture. The text should also prove useful as a design manual for practising aquaculturists and as a resource of current state-of-the-art methodologies associated with water reuse systems.

*Aerosol Optics* Alexander A. Kokhanovsky,2008-03-18 This new text offers experienced students a comprehensive review of available techniques for the remote sensing of aerosols. These small particles influence both atmospheric visibility and the thermodynamics of the atmosphere. They are also of great importance in any consideration of climate change problems. Aerosols may also be responsible for the loss of harvests, human health problems and ecological disasters. Thus, this detailed study of aerosol properties on a global scale could not be more timely.

**Fiber Optic Test and Measurement** Dennis Derickson,1998 This is the most authoritative, complete source of test and measurement information for engineers who design and maintain fiber optic networks. This book presents measurement principles for characterizing all three basic components of a fiber optic communication system: the optical transmitter, fiber

medium and optical receiver. It also covers system level measurements, and discusses the principles and limitations of current fiber optic testing equipment. It discusses testing to SONET/SDH international standards, and helps engineers choose the best approach to testing today's new erbium doped fiber amplifiers. The book provides detailed recommendations for understanding polarization states, and presents new methods for accurately characterizing the behavior of Wavelength Division Multiplexing (WDM) fiber systems. It includes detailed coverage of testing fiber in the local loop, using optical power meters and optical time domain reflectometers. It also reviews the latest state-of-the-art 10 Gb/s systems, and even faster systems on the horizon. The coverage is practical, helping professionals accurately measure and test fiber optic systems without becoming experts in theory.
